

# WHAT IS AMPLILIB ?

**amplilib** is not complicated...

**It's the cardboard that turns your smartphone into a portable speaker !**

This ecological and design speaker, 100% nomadic, is a French invention ( CocoRico ! )  
And eco-citizen ( CocoriGreen ! ).

**An ultra-resistant technical card, for a super-powerful sound !**

Amplilib offers a natural acoustic experience of up to 110 decibels (depending on the quality of the speakers on your smartphone). Inspired by the pavilion of the phonograph, it offers, thanks to its sound box, a directional diffusion and clearly improves the clarity of the sound of your phone.

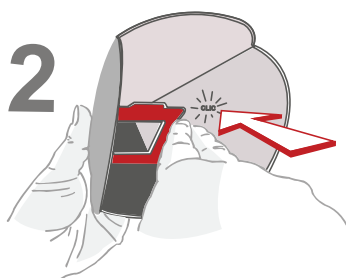

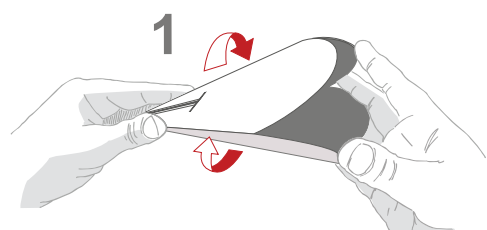

**Free yourself from the constraints**

No cables, no batteries, no Bluetooth, you are free to listen to your music freely and independently. In addition its compact size and lightweight ( 41g ) allows you to slip easily into his bag to take it everywhere! Well we will not do the modest with different rewards but 5 prizes in the Lépine 2017 contest including the gold medal! # Pride !!!

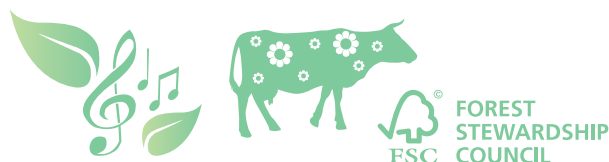

**Priority to simplicity**

Foldable and unfoldable by a simple lateral pressure, you just have to insert your smartphone in the slot provided for this purpose. This is the only effort that your Amplilib will ask you to transform into a small nomadic speaker! Then enjoy your favorite playlists, watch your series or clips of the moment, chat in speakerphone while keeping your hands free ... It is the Ampliliberty that opens to you !

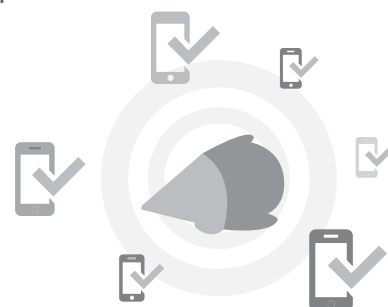

## Adopt the GreenAttitude

100% recyclable and biodegradable, Amplilib meets environmental and ethical standards. Made in FSC (responsible forests) technical card, based on inks and varnishes with water, it is an environmentally friendly product.

## Compatibility

Amplilib is compatible with the majority of smartphones available on the market. Find the details in the complete study conducted by [Enlightened Courts](https://e-raccourcis.org/enceinte-smartphone-amplilib/) with 33 testers (<https://e-raccourcis.org/enceinte-smartphone-amplilib/>)

## Use tips To optimize the use of your Amplilib :

- Pre-crack the slot and gently insert your smartphone the first time ( and only the 1st ! )
- Opt for a silicone shell ( your flap shell will not fit in your Amplilib, it will remove it )
- For optimum diffusion, tilt your smartphone slightly when placed in the Amplilib.

## Technical characteristics :

**Materials :** Technical card 2x350 gr - FSC standards

**Weight :** 41 g
